PROFESSIONAL SUMMARY

IT and automation engineer. I run IT operations and build internal tools and integrations for them, mostly with coding agents. At Kasa I am building a Wi-Fi management system for the properties on UniFi, with our own API. Before that, at 121, I automated CRM work in Odoo, wrote an MCP server for Odoo and shipped a ticketing app for technology requests. I continue improving how I orchestrate multiple agents and how I set up environments for them. I am also building Axoloom, my own startup for Google reviews.

TECHNICAL SKILLS

AI-assisted development: JavaScript / TypeScript, React, Node.js, GitHub.

AI systems and agents: OpenAI API, Anthropic API, Gemini, OpenRouter, MCP, AI agents, multi-agent orchestration, RAG / context-augmented pipelines, Vertex AI.

Agent tooling: Claude Code, Cursor, Pi, Oh My Pi, Orca, Jev (TypeSafe), Codex, OpenCode, Antigravity, StageWise. Setup of agent environments: skills, context files, diagnostics and guardrails.

Networking and Wi-Fi: UniFi / Ubiquiti, Tailscale, VPN, FortiGate, Palo Alto GlobalProtect, TP-Link, Asus.

Automation and integrations: n8n, REST APIs, webhooks, OAuth, JSON, Tampermonkey, Fireflies.ai, Dust.tt, ChatLLM Teams, ChatGPT Business.

Cloud and infrastructure: Google Cloud, Cloudflare (Access, R2, Workers, D1, KV, Queues, Durable Objects), Vercel AI Gateway, Docker Compose, Google APIs, OAuth consent screens, service accounts.

Platforms and collaboration: Notion, Slack, Odoo CRM/ERP, Google Workspace, Microsoft 365, Adobe Admin, Dropbox Admin, Figma licensing.

IT management and endpoints: NinjaOne, endpoint management, ITAM, asset inventory, monitoring, helpdesk, ticketing, onboarding/offboarding, Windows, macOS, iPhone management.

Security: MFA/2FA, Duo, Microsoft Authenticator, Active Directory.

Servers and databases: Windows Server 2012, Linux openSUSE, Synology NAS, MySQL, SQL Server, PostgreSQL, Supabase, Neon, Airbyte, Odoo data model (res.partner and related tables).

PROFESSIONAL EXPERIENCE

Kasa | Hospitality Technology Specialist | September 2026 - Present | Remote

- Building a Wi-Fi management system for all Kasa properties on UniFi, with a custom API to manage their networks.
- Develop with coding agents (Claude Code, Pi, Oh My Pi, Orca, Jev by TypeSafe) and improve how I orchestrate multiple agents and prepare the environments they run in.
- Coordinate work with the team in Notion and Slack.

121 LLC USA | IT Engineer, Automation & AI Systems | December 2025 - September 2026 | Hybrid

- Delivered two projects before leaving: a custom MCP (Model Context Protocol) server that lets AI assistants query live Odoo ERP/CRM data, and a web app with a ticketing system adapted for opening technology requisitions.
- All departments used the MCP server through Gemini. It has an admin panel for read permissions and a web chat to talk to Odoo, both on Cloudflare Workers and Pages, with Google Workspace sign-in.
- Built the ticketing web app with TypeScript and PostgreSQL, hosted on Cloudflare. All of 121 (about 70 people) used it, and late projects fell from 2-3 to 1.
- Created a LinkedIn-to-Odoo prospecting automation with Tampermonkey and n8n. It captured public profile data, cleaned it with AI and created the lead in Odoo CRM. This reduced a 4-hour daily manual task to about 8 seconds per lead, for 10 to 20 leads a week. Three people used it.
- Built a corporate HTML email signature generator with Google Sheets, Google Drive, Cloudflare R2 and a copy-ready web page. Signatures that could take up to a week now take 1 to 2 minutes, one at a time or in batches.
- Built and deployed full-stack AI systems with Node.js, Cloudflare Workers, Supabase and Neon, using Claude Code, OpenCode, Orca and StageWise.

- Created an internal HR incidents form with n8n Forms and Cloudflare Access. Only leaders could open it, it detected the user automatically and synchronized the employee list from Google Sheets. After a pilot with about 15 leaders it was adopted. HR (3 people) receives the reports, and incidents that used to go unreported now get reported.
- Compared NinjaOne with Atera and Action1, then chose and deployed it to manage about 100 endpoints (80 Mac, 20 Windows, plus iPhones) for users in South America, the USA and Europe. Wrote 5 management policies and negotiated a contract that included the ITAM module at almost no extra cost.
- Deployed self-hosted n8n with Docker Compose as the main internal automation platform, connecting Google Workspace, Odoo, Cloudflare and AI services in several production workflows.
- Administered Google Workspace and Google Cloud for automation projects: Google APIs, OAuth consent screens, service accounts, Vertex AI, Gemini and media generation models.
- Implemented Gemini, Vertex AI and ChatGPT Business for the whole company. Set up Fireflies.ai to summarize about 30 meetings a month on a single license.
- Supported Odoo CRM/ERP integrations, including lead automation and a fix for the vacation-day accrual limit.
- Set up Sunshine, Moonlight and Tailscale so the video team could work remotely on high-performance workstations with low latency.
- Made a 3-minute IT onboarding video for new employees with Veo 3.1 from Google Cloud Model Garden.
- Moved users to formal ticketing. On the first day they opened more tickets than the old GLPI system had recorded in total.

GNP | IT Engineer | January 2024 - December 2025

- Administered Google Workspace and handled day-to-day user issues.
- Supported Windows users with performance, security and general system problems.
- Performed preventive and corrective maintenance on hardware and software.
- Managed IT equipment and service purchases, including vendor evaluation and cost control.

Toka Internacional | IT Support Engineer | June 2022 - January 2024

- Managed Microsoft Active Directory accounts and permissions.
- Supported Palo Alto GlobalProtect, Duo, Microsoft Authenticator, Windows 10 Pro and the Microsoft 365 Admin Center.
- Handled front-line helpdesk tickets for corporate applications.
- Reached 96% SLA compliance and was among the engineers with the most resolved tickets.

Asia Robótica | IT Manager | February 2017 - February 2021

- Set up the IT department and administered Windows Server 2012 and Linux openSUSE servers, networks, hardware, software, hosting, web services and MySQL/SQL Server databases.
- Installed and managed network infrastructure with FortiGate, TP-Link, Asus and Ubiquiti.
- Led the data migration to a Synology NAS, which cut the power used by the old high-power hardware by about 20%.
- Implemented Google Workspace, preventive and corrective maintenance, IT purchasing, basic virtualization and remote work during the pandemic.

ENTREPRENEURSHIP (PERSONAL PROJECT, INDEPENDENT OF MY JOBS)

Axoloom | Founder and developer | September 2026 - Present | Personal venture

- Building a SaaS that gathers the Google reviews of multi-location businesses in one inbox, with AI reply drafts that a person approves, NFC and QR review plates and issue tracking. Built on my own with coding agents.
- TypeScript, React, Hono and Cloudflare (Workers, D1, KV, Queues, Durable Objects) on the real Google Business Profile API. Not launched yet; it runs in staging.

EDUCATION

Systems / Computer Engineering, Tecnológico Superior de Jalisco Zapopan / Instituto Tecnológico José Mario Molina Pasquel y Henríquez, Campus Zapopan | 2016 - 2022

Informatic Technologist, Centro de Enseñanza Técnica Industrial | 2012 - 2016

LANGUAGES

Spanish: native | English: B2, conversational and technical reading; daily working language at Kasa
